Which of the following statements is true about the Mandibular Permanent Central Incisor?

- a) It is the largest anterior tooth
- b) It erupts after the maxillary canine
- c) It is the smallest among all permanent teeth
- d) It has the most complex root anatomy

answer: c

Which of the following best describes the labial view of the Mandibular Permanent Central Incisor?

- a) The crown has an oval outline with rounded incisal angles.
- b) The mesial and distal contact areas are located at the cervical third.
- c) The incisal ridge forms a right angle with the long axis of the tooth.
- d) The labial surface is highly convex along its entire height.

answer: c)

Which of the following is true regarding the mesial and distal outlines of the Mandibular Permanent Central Incisor?

- a) Both outlines are strongly curved and asymmetrical.
- b) Both mesial and distal outlines are straight and very similar.
- c) The distal outline is concave while the mesial is convex.
- d) The mesial outline is longer than the distal outline.

answer: b

Which of the following statements correctly compares the distal and mesial aspects of the Mandibular Permanent Central Incisor?

- a) The cervical line on the distal is more curved than on the mesial.
- b) The distal developmental depression on the root is deeper than the mesial.
- c) There is no developmental depression on the distal root surface.
- d) The mesial root surface is always more concave than the distal.

answer: b

What is the geometrical outline of the Mandibular Permanent Central Incisor from the incisal aspect?

- a) Diamond-shaped
- b) Oval-shaped
- c) Triangular-shaped
- d) Hexagonal-shaped

answer: a

Which of the following statements about the lingual aspect of the Mandibular Permanent Lateral Incisor is correct?

- a) The lingual fossa is less developed compared to maxillary incisors.
- b) The cingulum is centrally placed and very prominent.
- c) The marginal ridges are well-developed and prominent.
- d) The lingual surface shows deep pits and grooves.

answer: a

Which of the following is a correct characteristic of the Mandibular Permanent Lateral Incisor from the incisal aspect?

- a) The mesial and distal halves are not identical.
- b) The incisal ridge is centered and symmetrical.
- c) The cingulum is located exactly at the center of the crown.
- d) The incisal ridge is parallel to the labiolingual bisecting line.

Ans:a
