

• HYDROCARBON TOXICITY :

1)Kerosine about gut dialysis:

coingestion with intubation

2)Treatment of kerosine poisoning includes the following except

Select one:

- a. demulcent ingestion
- b. Artificial respiration
- c. Gastric lavage with endotracheal intubation
- d. Antibiotics for treatment of infection
- e.Forced diuresis

Answer:e

3)Tracheal intubation is essential before gastric lavage except

Select one:

- a. Kerosine poisoning
- b. Paracetamol
- c. Comatose patient
- d. Convulsion
- e. Patient with absent gag reflex

Answer:b

4) Regarding the following: 1-Kerosine/ 2-paracetamol/ 3- corrosives/ 4- iron.

Which one is a contraindication

for gastric lavage:

- a. only 2 is correct
- b. 2 and 4 are correct
- c. 1 and 3 only

Answer:c

28)What is the effect of hydrocarbon exposure on the heart?

- a) Bradycardia
- b) AV block
- c) Tachycardia and ventricular fibrillation
- d) Asystole

answer:c

14) Which is the most important investigation in cases of kerosene ingestion?

- a) Liver function tests
- b) Renal function tests
- c) Chest X-ray
- d) Serum electrolytes
- e) ECG

answer:c

15) What is the first emergency treatment for kerosene ingestion?

- a) IV antibiotics
- b) Gastric lavage
- c) Induced vomiting
- d) Activated charcoal
- e) Oxygen administration

answer:e
