1)Anchor peptidoglycan layers to the plasma membrane:

- a. Teichoic acid
- b. Lipoteichoic acid

answer:b

2)Comma bacteria is:(related to lec 4)

- a. neutrophiles
- b. alkaliphiles
- c. psychrophiles

answer:b

3)Which type of cocci bacteria is cuboidal:

- a. tetrad
- b. streptococci
- c. sarcina

answer:c

4)One of the following bacteria considered as a grape structure:

- a) staphylococci
- b) streptococci
- c) spirochete
- d) vibrio
- e) Coccobacillus

answer:a

5)The cell wall of gram-negative bacteria may contribute to the development of septic shock. Identify the component which is most associated with the induction of septic shock? Select one:

- a. Capsular protein
- b. Lipopolysaccharide
- c. Peptidoglycan
- d. Phospholipid
- e. Teichoic acid

answer:b

6)One of the following bacteria have a lipopolysaccharides in its cell wall:

- a) gram-positive bacteria
- b) gram-negative bacteria
- c) streptococci

answer:b

7)What is the level of classification that strain refer to:

- a.Subspecies
- b.Species
- c.Genus
- d.Family

Answer:a

8)Vibrio cholerae is classified as:

- a.Gram-positive bacilli
- b.Gram-negative cocci
- c.Gram-negative comma-shaped
- d.Gram-positive cocci

Answer: c

10)the true statement about Mycobacterium is:

- a.gram negative
- b.acid fast staining
- c. grow fast in lab

Answer : b

11)The best describes of species :

- a.Related to strain
- b.Sub set of species
- c. Related of species
- d.Related of genera

Answer:

12)True classification of bacteria is :

- a.domain , phylum , class , order , family , genus , species
- b.Phylum , domain , class , order , family , genus , species
- c.Class , order , family , division , genus , species

Answer:a

13)All of the following is classification of cocci except:

- a.diplodococcus
- b.tetracoccus
- c.sarcinae
- d.palisade

Answer:d

14) Cocci arranged in cuboidal packets of eight are called:

- A. Diplococci
- B. Streptococci
- C. Staphylococci
- D. Sarcinae

answer:d

15) Which bacteria cannot stain with gram stain because it's complex waxes :

- a. mycobacterium
- b. Staphylococcus
- c. E. Coli

answer : a
